It is perhaps significant to recall that the earliest Washo experience with livestock revealed a knowledge of the various techniques of using large animals, i.e., riding, driving and packing. The fact that these experimental techniques were used on an ox or cow rather than a horse is significant in understanding the processes involved in the diffusion of animal-use techniques (Downs, 1961c). With the exception that these techniques were finally transferred to the horse we can say that the Washo developed very little beyond skills displayed in the first instance.

Although I cannot presume to offer a complete explanation of this situation, it would perhaps be valuable to attempt to answer the question of why the Washo did not respond to the potential of animal husbandry.

As a basis we may refer to the hypothesis set forth elsewhere in this volume, that for ecological and historical reasons the Washo tended to be oriented to the west rather than east. The great barrier of the Sierra offers little encouragement to the use of horses or the keeping of herds.

There also appears to be reason to hypothesize that Washo culture itself holds some of the answers to this question. From the very earliest contact Washo response to the new alternatives presented by white culture and technology has been to make a minimal adjustment of aboriginal behavior. Thus the Washo in part continued their gathering, hunting and fishing cycle without permanent homesites until the 1920's, when the last nomadic band became sedentary. White settlements were obviously viewed as sources of food either through temporary wage labor, which utilized aboriginal skills such as brush clearing and weed picking, or through attenuated gathering behavior such as begging, scavenging or theft. The livestock introduced by white men was looked upon primarily as a source of meat. Even today the Washo tend to live in terms of aboriginal orientation toward subsistence, involving a highly mobile opportunism that exploits the short term income possibilities of the economic system of western America. In the 19th century this minimal adjustment produced real rewards for the Washo. As commercial hunters and fishermen, harvest hands, brush clearers, woodchoppers, ranch hands, casual prostitutes and kitchen workers, etc., the Washo accepted jobs that whites, who had come west to make fortunes in ranching or even greater fortunes in mining or lumbering, did not care to perform. However, with the gradual restriction of hunting and fishing and the shift from field agriculture to stock raising in western Nevada, the Washo found their skills no longer in demand, and they entered a period of economic depression which continues at the present time.

Although the present social, economic and cultural condition of the Washo is vastly different from the condition of a century ago, it seems clear
